

ASPHALT RELEASE

Potmix[®] Asphalt Release is a release agent for machinery and tools that come in contact with bituminous substances. The product does not break down the bitumen like other products (FAME/RME and diesel) do. Asphalt Release is made of biodegradable natural fat-derivatives and surfactant substances. It contains no solvents and, unlike other products, has no flash point; making it a safe choice in hot working areas. The colour is light blue to visually aid application of product.

Test 1: Hot mix asphalt on diesel, FAME/RME and Asphalt Release. Result after five minutes.

Test 2: Dissolution of hot mix asphalt after four hours.
